

Haxida

Whitepaper 1.0

About us

Our team members (3 people) are new to the crypto industry. We fully apply the experience acquired in other fields for the development of Haxida-Labs.

The project started with some developers and crypto industry enthusiasts discussing the interaction and compatibility of popular blockchains and the problems they may currently suffer from.

The high fee paid to miners, the blockages suffered by the network when it is saturated, etc.

We decided to organize ourselves to try in some way, to contribute something existing, but serve to solve the current existing problems.

We are very excited about this new project and we hope that in 2 years from now, Haxida will be a benchmark in the community.

Goals and vision

Haxida was born with a single idea in mind, to develop its own Ecosystem based on Blockchain technology and improve present.

There is a real problem with network fees, Haxida plans not to inherit this common problem today.

We want to develop our own ecosystem, our own market tools, help the community and provide what is required according to demand.

We have started completely from scratch.

Without resources, in a humble way trying to make our way thanks to the token and the funds that have been allocated for the project.

That our project ends up being a reality and that we get to complete the phases that we have proposed, will depend on the community and the acceptance we have.

Little by little, but with firm steps, we will evolve if the community allows us.

All our work will always be available on github.com, it will be open source. So we hope that other developers will join us at Haxida-Labs in the future so that we can continue to look at higher goals.

Transparency

We want to be transparent, we are not just another coin of meme.

We have not come with the intention of deceiving anyone.
The team, as in any other token, has its accounts destined for the project (Marketing and Jobs) that will be in charge of financing everything that comes from now on.

Personal accounts?

And then there are the personal accounts of each teammate, who have acquired their HAX like anyone else.

Perhaps a small initial percentage of the gift has been sent to different acquaintances once the token is released, but this always from the percentage that we initially keep, distributing it in acceptable percentages so as not to leave the community on the sidelines.

That any of the team's personal accounts decided to sell a percentage of their HAX portfolio? I do not think this is a problem for anyone and even more so if they initially sold when we were just starting.

Haxida was released on pancakeswap at 100%. So anyone who entered the token at that time, could acquire what he wanted.

What those personal accounts have obtained or obtain is their personal thing, they bought like anyone else.

They are free to do what they want with that small percentage that they have been able to acquire and this does not mean that we are a scam. We would like to make all this clear from the beginning, as we need your trust for this to grow.

The Haxida token in the future will be the basis of our future cryptocurrency.

As we progress in the project and fulfill the different phases proposed, our personal data will appear reflected in the project and it would be absurd to do things wrong if we want to move forward with the project.

Don't be suspicious of us. We are new, humble and eager to grow.

We prefer to take our time to clarify all this, to avoid that nobody can brand us as scammers or anything like that.

Distribution

NAME: Haxida
Ticker: HAX
Decimals: 8
Total Supply: 100,000,000,000,000

Contract: 0xbC718075f36A37459D855BDaAc5a3F057Eb2D98b

Creator: 10%
Address: 0xf2FCfde0753e6e22304e066E4441B5B3C4339B1a
Destination: Invest in the project, make payments, etc.

Resources: 8%
Address: 0x7e4d31D3D92941a0C9A36850Cf4db347450a0b39
Destination: Marketing, resources, etc.

Jobs: 8%
Address: 0x4E93Dbe9349d8eD0085A44A1c81079672261c242
Destination: Finance the costs of jobs to be carried out.
